StratusPower™
The ultimate UPS for net-zero data centers

StratusPower is an innovative uninterruptible power supply (UPS), specifically designed to meet the rigorous demands of today's IT infrastructure.

Designed and manufactured in Switzerland, StratusPower's superior topology, referred to as **DARA**, ensures full availability with **no single point of failure**, providing data center operators with complete peace of mind. Furthermore, installation of StratusPower is straightforward and maintenance is simple and non-intrusive.

Minimize your total cost of ownership while achieving the highest levels of availability and reliability for your data center.

Green UPS · DARA TECH · SWISS MADE

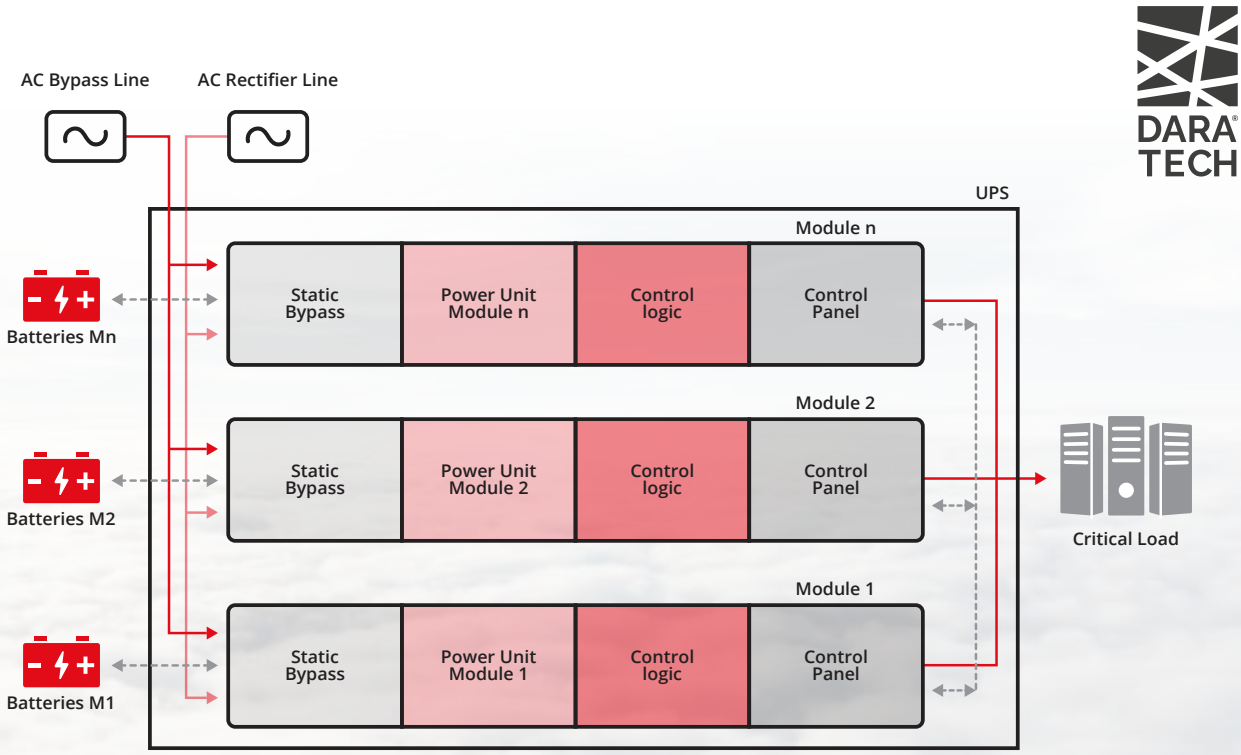
DARA
Take your power availability to the next level

When it comes to availability, it's what's inside that counts

With DARA, each UPS module is independent, redundant and interconnected. Each module is a complete UPS system in its own right, with three independent power converters, a static bypass and all the hardware devices needed to safely isolate a fault without impacting the load. This maximizes the mean time between failures (MTBF) and safeguards the power to your critical applications.

DARA's Distributed Decision Making technology, referred to as DDM™, elevates redundancy by enabling collaborative decision-making among all modules. This ensures the continuous power supply to your load, even during crucial decision-making moments. With DDM, the UPS can make distributed decisions, eliminating the single point of failure typically associated with master-slave technology. As a result, downtime is minimized, and critical loads remain protected.

Maximized availability at module, frame and system level



DARA TECH

Mean time to repair (MTTR)

DARA's technology on the frame level has been designed to accommodate **non-intrusive maintenance** and to **minimize mean time to repair (MTTR)**, ensuring that any downtime is kept to an absolute minimum. For example, in the event of a power failure, frontal access to components avoids the need for removing modules, thereby reducing the risk of human error.

Power Availability

Unveiling the power of StratusPower

At Centiel, we understand our customers' pain points and have designed the StratusPower with availability and sustainability as major considerations. With StratusPower, we guarantee peace of mind by knowing that your critical infrastructure is protected by the most advanced UPS technology.

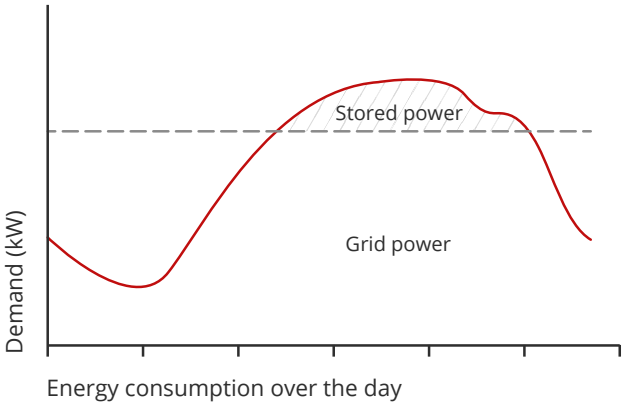
Advanced energy management

StratusPower provides **peak-shaving capabilities** to help businesses manage electricity usage and reduce costs. By utilizing StratusPower's peak-shaving feature, businesses can reduce their energy consumption during peak hours when electricity rates are typically at their highest. This results in significant cost savings.



StratusPower's peak-shaving capabilities

At times of peak consumption, grid operators may charge higher prices for their power. To minimize costs for the user, a portion of the energy stored locally in the UPS can be utilized during these times, thereby reducing the amount drawn from the grid.

The UPS batteries can then be recharged with power from off-peak hour.

With the future in mind

StratusPower is **future-ready** and can connect to a variety of power generation sources. It is equipped to provide grid support and manage energy efficiently based on the specific requirements of each application.

centiel

DC Flex technology

Our unique DCFlex© technology offers unparalleled flexibility when it comes to battery storage installation and configuration, as well as preparing the infrastructure to manage both current and future energy sources.
Our UPS solution is compatible with various battery storage devices, allowing you to reuse the DC supply or to choose the option that best suits your needs and budget.

The StratusPower battery charging current capability is 500 percent higher than our closest competitors, meaning **faster charging times** and more **efficient use of your batteries.**

DCFlex© **240 to 600VDC**

Predictive and remote health monitoring

This not only saves time and effort but also improves your system's overall reliability and safety.
With its computing capabilities and more than 100 measurement points, StratusPower does the work for you, ensuring that maintenance is performed promptly and accurately.

Bluetooth connectivity allows technicians for easy, **non-intrusive** monitoring via mobile devices, with the Centiel app providing real-time status updates and alerts.

StratusPower provides advanced **cybersecurity** features in compliance with **IEC-4-62443-2**, making certain that your critical data and systems are protected from cyber threats.

Robust and reliable semiconductor technology

The StratusPower also boasts a robust and reliable design, including a proprietary technology for inverter physical isolation in case of IGBT failure, ensuring maximum uptime for your critical infrastructure.

The **triple-mode parallel** bus provides an extra layer of redundancy, eliminating any single point of failure in communication between frames and modules.

At Centiel, we take reliability very seriously. That's why we designed our technology with **extra-safe power of 24%**, ensuring a higher level of reliability and redundancy. Even if a redundant module fails, our advanced technology guarantees no single point of failure. With a continuous module operation capacity of 75 kW, the 750 kW StratusPower UPS transforms into a 900 kW powerhouse.
Our UPS solution is compatible with various battery storage devices, allowing you to reuse the DC supply or to choose the option that best suits your needs and budget.

75kW **UPS Module**

Exceeding performance expectations

With a THDi of less than 1 percent, the StratusPower provides an excellent performance that exceeds regulatory requirements.

The UPS is capable of handling 125% overload for 15 minutes and 150% overload for 2 minutes, ensuring uninterrupted power delivery during peak demand scenario.

A short circuit capability above 3xIn safeguards your equipment and system integrity despite electrical faults.

Tangible sustainability:
We help your data center achieve CO_2 emissions targets through our solutions and services.

Green UPS

Energy efficiency

StratusPower is designed with energy efficiency in mind, using the latest technology to reduce energy consumption and minimize losses.

97.6% (VFI) efficiency

Zero waste

StratusPower is manufactured using eco-friendly materials, ensuring that our products have minimal impact on the environment.

30+ years of UPS design life

15+ years of life on replaceable components

Net zero by design

Our company is continuously committed to improving our sustainability practices, and we manufacture StratusPower using environmentally friendly processes to minimize our impact on the environment.

95% of the energy used for production testing is recycled
